

NISSAN POWER RACK & PINION STEERING GEAR

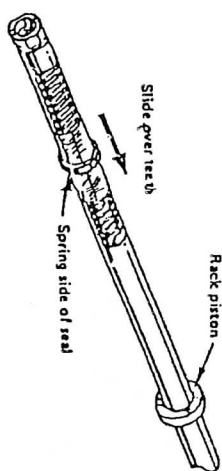

IMPORTANT RACK SEAL INFORMATION

1. Form the piece of plastic film into a ring and slide it into the middle of the oil seal. Make sure the plastic film overlaps itself.

2. Now carefully slide the plastic film and oil seal onto the rack, while keeping the oil seal at the middle of the plastic film and the spring side of the seal towards the rack piston.

3. Your kit contains a sealing ring with a larger wall dimension (SEE FIGURE BELOW). This was designed to replace a sealing ring and O-ring design which comes on the original units. The O-ring was omitted and the sealing ring wall increased to make-up the difference between the piston and case bore.
